

Cosmi Code Summer Internship Program

Week 3- Task # 01 and Task # 03

Task # 01: Write a blog post (600 words) including title tags, meta description, headings, and keywords.

Task # 03: Perform an SEO audit of one existing blog (yours or a provided one) and note improvements.

Submitted by Xenobia Mustafa Khan

Intern ID: CCP\345670084

Submission Date: 16th July 2025, Wednesday

Task # 01: Write a blog post (600 words) including title tags, meta description, headings, and keywords.

How Academic Stress Impacts Mental Health (And How to Cope)

Meta Description:

Struggling with academic stress? Don't worry- discover how it affects student mental health and learn 5 simple strategies to cope with burnout and anxiety.

The Pressure of Being a Student Today

Between those never-ending assignments, exams, last-minute deadlines, and expectations, today's students are under more pressure than ever, according to studies, compared to the whole of the 20th century.

Academic stress is no longer just about studying late into the night — it's about becoming a constant mental load that impacts focus, motivation, and even emotional well-being, that eventually leads to a negative impact on one's physical health.

The constant drive to achieve the impossible, compete while their mind is completely burnt out, and "do more" can lead to feelings of anxiety, self-doubt, and eventually burnout. And yet, this is often brushed off as "just part of the student experience."

However, this can worsen over time, so the question arises: what happens when the pressure becomes too much?

The Link Between Academic Stress and Mental Health

Studies have shown that there is a direct link between academic stress and mental health in students. Stress triggers the body's fight-or-flight response, which is beneficial for short-term motivation, but can also be dangerous when it becomes chronic. Some of the common mental health issues triggered or worsened by academic pressure include:

- Anxiety and panic attacks
- Depression or prolonged low mood
- Emotional exhaustion
- Difficulty concentrating or retaining information
- Sleep disturbances

What's worse? Many students silently carry this weight, believing that admitting they're overwhelmed is a sign of failure.

Signs You Might Be Burning Out

Academic burnout doesn't happen overnight. It builds gradually, and if left unaddressed, it can severely affect both performance and mental health. Here are a few early warning signs:

- Feeling tired even after resting
- Dreading thinking about doing school-related tasks
- Losing motivation, even for things you once enjoyed
- Experiencing brain fog, irritability, or mood swings
- Feeling emotionally numb or detached

If any of these resonate with you, your mind might be telling you it's time to pause what you are doing, and maybe you should take a break.

5 Coping Strategies for Academic Stress

So, what can you do when the pressure feels too much?

Here are five practical strategies to help reduce stress and protect your mental health:

1. Set realistic goals

Break big tasks into smaller, achievable chunks. This helps reduce overwhelm and gives you quick wins.

2. Practice time blocking

Organize your day into focused work periods and breaks. Don't forget to schedule *actual rest* — and that doesn't mean just screen time.

3. Journal your stress

Writing things down can help you process anxious thoughts and reflect on what's triggering them.

4. Move your body

Physical activity (even just a walk) helps reset your mind and reduce stress hormones.

5. Talk to someone

Reach out to a friend, counsellor, or support group. You don't have to figure it all out alone.

Final Thoughts

Academic stress is real, and it affects more students than you might think. Ignoring the signs can lead to long-term harm, but learning to listen to your mind and manage stress in healthy ways can make a huge difference.

You're allowed to take breaks. You're allowed to ask for help. And you don't need to earn rest.

Your grades matter, but your mental health matters more.

Task # 03: Perform an SEO audit of one existing blog (yours or a provided one) and note improvements.

Elements	Status	Notes
Title Tag	Present	Includes the target keyword "academic stress" and is within the ideal length
Meta Description	Present	158 characters, includes keyword + clear CTA
Keyword Usage	Good	Primary keyword used in title, meta, intro, and body
Headings	Used Correctly	H1 for the blog, H2s for section-wise, and H3s for the strategies
URL Structure	Not Sure	Depends on the platform being used
Internal Links	Missing	Could add links to other blog posts or resources
External Links	Missing	No outbound links to authoritative sources (e.g., research, support pages)
Image Alt Text	Missing	No images used — add at least one with proper alt text
Mobile Optimization	Can be Assumed	Text formatting is mobile-friendly
Readability	Strong	-
