Submission Date: 16th July 2025, Wednesday

Learn about On-page SEO elements and submit a summarized PDF.

On-page SEO consists of various factors that directly affect a webpage's ranking in the search engine results.

The key elements of on-page include the title tag, meta description, headings, keywords and their placement, URL structure, internal links, external links, image alt text, content quality and readability, and mobile optimization and page speed.

1. Title Tag

A clickable title that appears in search results, ideally around 50 to 60 characters, which should be clear, relevant, and include the target keyword.

2. Meta Description

A summary, about 150- 160 characters, under the title tag in search results, which should include keywords and a call-to-action to the reader.

3. Headings (H1, H2, H3)

Organizes the content, making it easier to read through the content. H1 is used for the main title, H2s are used for subheadings, and H3s are used for smaller sections.

4. Keywords and its Placement

A very important element which helps your content's ranking in the search engine. So to increase the ranking of your content, focus on 1 primary keyword and 1-2 secondary keywords, and include them in the title tag, meta description, first paragraph (introduction), headings, and naturally in the overall content.

5. URL Structure

We should keep URLs short, keyword-rich, and readable, meaning they should avoid the usage of symbols and unnecessary numbers.

6. Internal and External Links

Internal links direct readers to other posts on your site, while external links lead readers to other trusted sources for the credibility of your content. These links help with the SEO and the user experience.

7. Image Alt Text

Images and any sort of visuals help make your content look appealing and can attract more readers. Every image should have a descriptive alt text with relevant keywords. This helps visually impaired users and can highly improve image SEO.

8. Content Quality and Readability

SEO favors genuine, helpful, well-structured writing, and with a human unique voice, which can be done with the usage of short paragraphs, bullet points, and a unique and conversational tone. You also have to ensure that the content answers the user's intent for reading your content.

9. Mobile Optimization and Page Speed

One's blogs should load quickly and be easy to read on mobile devices, so that's why one should use compressed images and clean formatting.

Thus, to conclude, On-page SEO is about helping both search engines and readers understand and value your content. It's not about stuffing in keywords — it's about strategic clarity, structure, and purpose.
